European Birch is a strong, fine-grained wood that is mainly off-white in color, although it may contain light hues of yellow-brown or pink. It may also contain natural imperfections which add character and uniqueness to the wood.

1. The finest European Birch is sanded until smooth and vacuumed.
2. An equalizer stain is applied to balance the base color of the wood.
3. A toner is then applied to establish color uniformity.
4. A deep penetrating stain is applied to reveal the hidden beauty of the natural grain.
5. All stained surfaces are hand-rubbed and wiped of excess stain, and slowly air-dried.
6. A wood sealer is then applied, penetrating all exposed wood surfaces for uniform protection.
7. All surfaces are then hand-sanded, providing a smooth, consistent surface.
8. A glaze is applied by hand (if applicable).
9. A color consistency examination is performed with additional touch-up if needed.
10. A final protective topcoat is applied, maximizing resistance to scuffing, moisture, fading and most household chemicals.
